Project Overview

BlindChoice is a C++ application that manages book and film choices with a GUI interface. It provides functionalities for editing book and film details and saving choices.

Getting Started

Prerequisites

- **C++ Compiler**: Ensure you have a C++ compiler installed.
- **Qt Framework**: The project uses Qt for the GUI components.
- **CMake**: Used for building the project.

Functional:

- on request, a table with the top 10 popular books/movies is displayed
- add a book/movie
- select a book/movie by genre
- view the entire table (which initially has 20 books and movies from us)
- output random books/movies
- delete/change the line

Widgets:

- Buttons (book/movie)
- Table (result in table format/or the whole list)
- Input field (adding a new one)
- Drop-down list (genre)
- Scroll by table

Description:

- On the first screen you have two buttons: "Book" or "Movie".

- Clicking on any of them leads to a screen with many buttons to choose from: "Add new", "Look at file», «Get random».
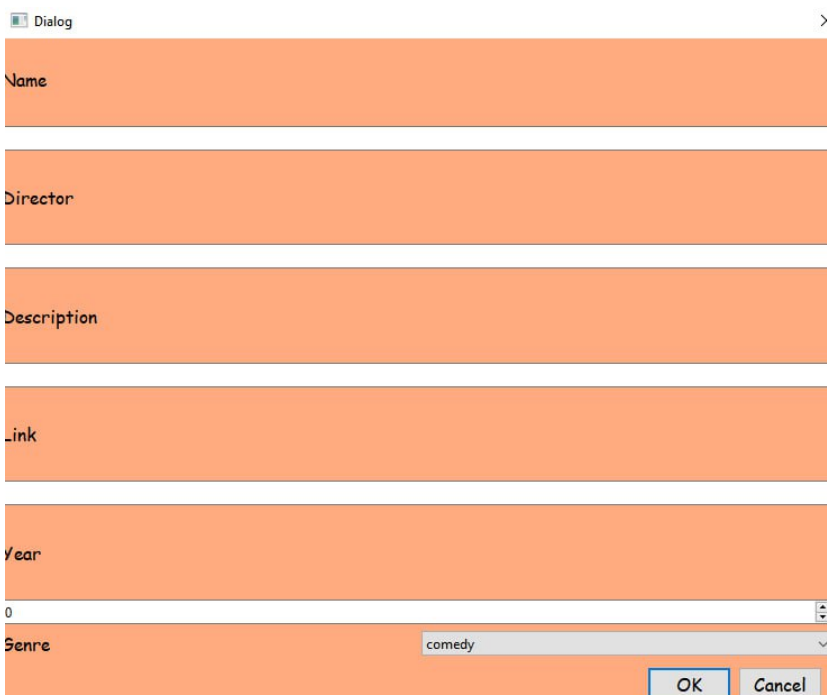

- If you chose a <mark>book</mark> the "Add new" button displays a window with five fields for entering Name, Author, Description, Link and Year and you can also select Genre by ticking off the list of genres.

- If you chose a <mark>film</mark> the "Add new" button displays a window with five fields for entering Name, Director, Description, Link and Year and you can also select Genre by ticking off the list of genres.
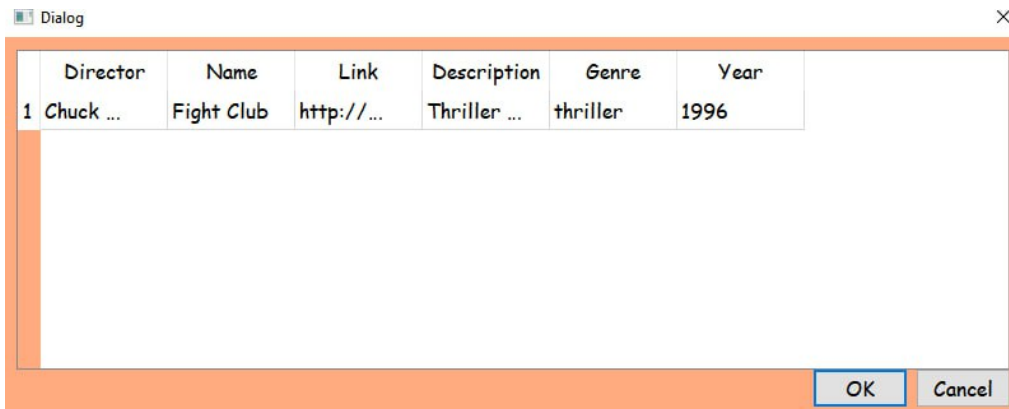

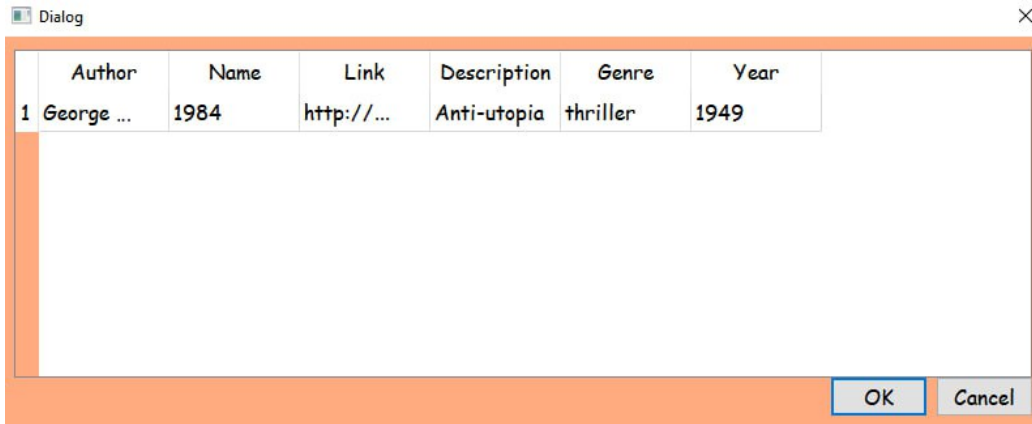

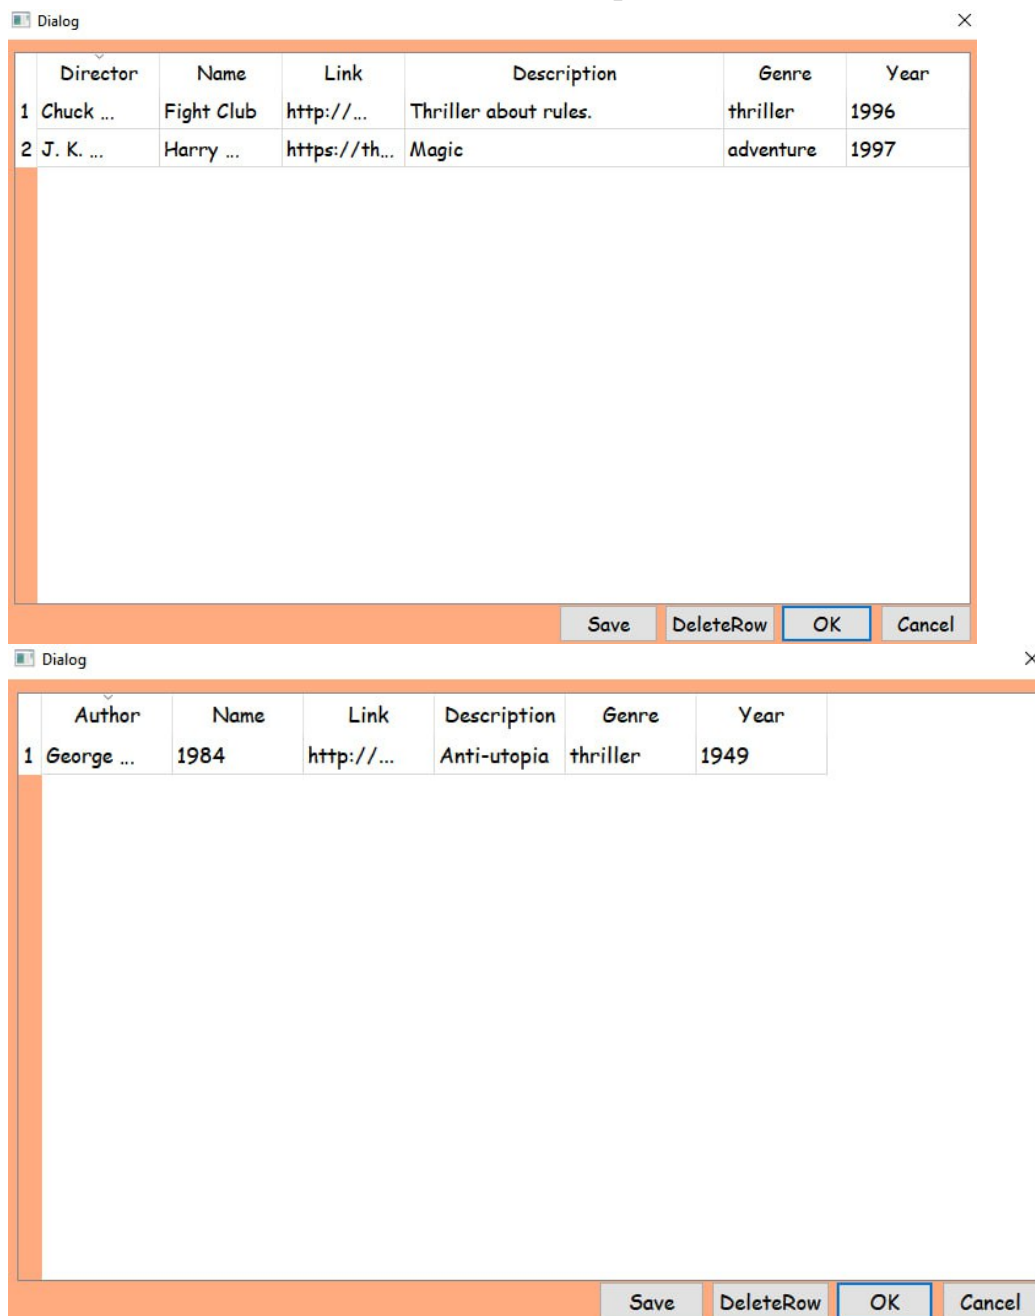

- The "Get Random" button displays a window with a randomly selected book/film, its genre, link, etc. is displayed under the title
